

Map #2:

Amount* of rubber tire playground material per student (sq. ft.), by ward (2017)

*Calculated by taking total square feet of crumb rubber in playgrounds, by ward, divided by the number of public school students enrolled in MPS schools in that ward.

Colors indicate if ward is above or below the median of this calculation, or 6.5 sq ft/student.

Data collected by Public Health Advisory Committee member with information from Minneapolis Public Schools; playgrounds are operated under both Minneapolis Park and Recreation Board and Minneapolis Public Schools.
