

EXHIBIT A

This job (Public Safety) PSVH1905 is the redlight camera data for the City of Minneapolis. This job will run at Noon (1200 hours) on a daily basis (Monday thru Friday but not during State Holidays)

Minneapolis will FTP the 30 Character file (below) to PRO.VH1905MA(+1) before 11:00am. You may actually send 2 files but I would caution against it, the second file should be thought of as an emergency file, it would again be the +1 generation.

Minneapolis will download PRO.VH1905MO(+0) for the current run anytime after 1:00pm (1300 hours). Minneapolis will have 20 days of history on this same file name. So if one wished to download data from 5 days ago, you would download PRO.VH1905MO (-4) before noon and (-5) after the noon run has created another generation.

The output file is 300 characters long and contains the data below.
