

# Comparison of measures for Minneapolis, Saint Paul, and Suburban Hennepin County

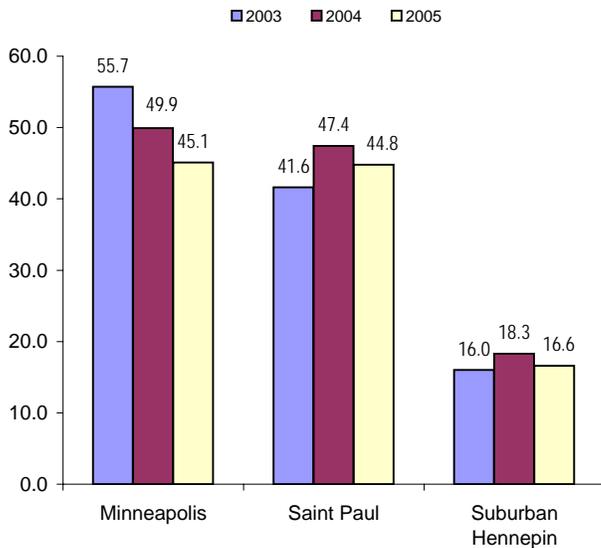

**Percent of adults at healthy weight**

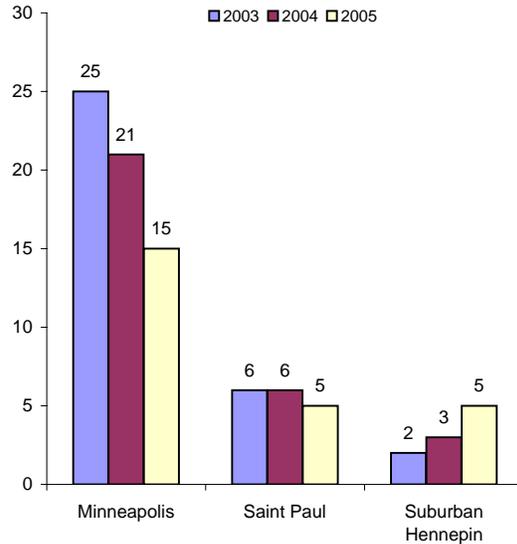

**Number of gonorrhea cases per 100,000 residents**

**Number of pregnancies per 1,000 teens aged 15-17 years**

**Number of homicide deaths among residents aged 15-24 years**

Notes: "Suburban Hennepin" includes all of Hennepin County except the City of Minneapolis. Rates are based on 2000 U.S. Census data. Pregnancies include live births, fetal deaths, and elective abortions. Infant mortality rates are calculated on 3-year periods due to low incidence rates.

Acknowledgments: Hennepin County data were provided by the Hennepin County Department of Human Services and Public Health. Saint Paul data were provided by Saint Paul-Ramsey County Department of Public Health. Lead data for all areas were provided by the Minnesota Department of Health.
