Minneapolis Residents' Live Births Summary

OVERVIEW

This data book focuses on live births to Minneapolis residents from 2005 to 2007. There were 18,846 births to the residents of Minneapolis during this period. Selected characteristics of these births by community and neighborhood are presented in this report.

The City of Minneapolis is divided into eleven communities: Camden, Northeast, Near North, Central, University, Calhoun Isles, Powderhorn, Phillips, Longfellow, Southwest, and Nokomis. The communities are further divided into 85 neighborhoods. This data book focuses on the 81 neighborhoods in which births occurred between the years 2005 and 2007.

This data book is arranged by communities and by neighborhoods within communities. The sum of births for the communities does not equal the total number of births for Minneapolis. This difference is due to the fact that on some birth certificates, mother's residence information was incomplete or unavailable. These births are included in Minneapolis total, but assigned to the category "Unknown Community."

This data book provides the health and social characteristics that are commonly used to assess pregnancy outcomes. Data are collected on these characteristics for all births. These data demonstrate the diversity among the neighborhoods of Minneapolis which can assist with neighborhood planning efforts.

Data trend comparisons must be undertaken with caution when the number of births in a given area is very small. In an attempt to provide greater stability in birth trends, birth counts were aggregated over a three-year period. Nonetheless, the numbers of births in some neighborhoods remain small. *Counts less than or equal to 5 are denoted by (<=5) and percentages for these counts are denoted by *(asterisk).*

Appendix: Definitions

Adequacy of care: This prenatal care utilization index was created using the recommended Prenatal Care Visit Schedule by the American College of Obstetrics and Gynecology. Factors used were gestational age, time prenatal care began, and the number of prenatal care visits obtained from the actual birth certificate. This index provides a standardized method for assessing the quality and amount of prenatal care.

Gestation: The period of development of the fetus, expressed in completed weeks, calculated from the first day of the last known menstrual period.

Trimester: One third of the total gestational period necessary for a full-term pregnancy. Thirteen weeks are allotted each trimester. The count of weeks begins with the first day of the last known menstrual period.

Reported Percentages: The percentages used in the tables of this publication reflect the proportion of known values. Data for many of the factors reported in the tables contain missing values, thus will not always total to 100 percent.
