

# Appendix A: Persons on certain medications

Complete list of medications that may increase a person's risk for negative health effects from extreme heat.

- Alpha adrenergics<sup>4,6</sup> (a.k. a. Alpha blockers)
- Amphetamines<sup>4,5,6</sup> (e.g., diet pills)
- Anticholinergics<sup>1,2,4,6</sup> (e.g., cough and cold medications, interfere with sweating)
- Anticonvulsants<sup>5</sup> (e.g., seizure medications)
- Antidepressants<sup>3,4,5</sup> (interfere with the body's cooling functions or water/salt retention)
- Antihistamines<sup>4,5,6</sup>
- Antihypertensives<sup>3,4</sup> (interfere with the body's cooling functions/decrease the body's ability to thermoregulate)
- Anti-Parkinsonian<sup>3</sup>
- Antipsychotics/Neuroleptics<sup>3,4,5</sup> (interfere with the body's cooling functions or water/salt retention)
- Benzodiazepines<sup>4</sup>
- Beta blockers<sup>4,5,6</sup> (profoundly impact thermoregulation by decreasing the body's ability to shunt large volumes of hyperthermic blood away from the core and to the skin)
- Calcium channel blockers<sup>4,6</sup>
- Cocaine/illicit drugs<sup>4,5</sup> (decrease the body's ability to thermoregulate)
- Diuretics<sup>1, 2, 4,5,6</sup> (can cause dehydration, decrease the body's ability to thermoregulate)
- Laxatives<sup>4,5,6</sup>
- Phenothiazines<sup>4</sup>
- Thyroid agonists<sup>4</sup>
- Tranquilizers<sup>1</sup>
- Vasoconstrictors<sup>4,5</sup> (profoundly impact thermoregulation by decreasing the body's ability to shunt large volumes of hyperthermic blood away from the core and to the skin)
