

# Minneapolis Pedestrian Traffic Estimated Daily Total (EDT)

This map shows pedestrian traffic in Minneapolis. A total of 277 count locations are listed on the map and are labeled with the bicyclist Estimated Daily Total (EDT). For locations counted in multiple years, only the most recent data is listed.

The map also illustrates the level of walking on various streets and paths. Darker and wider purple lines depict higher levels of traffic, while lighter and thinner purple lines represent lower levels of traffic. The geographical extent of these lines was made using anecdotal knowledge of the author. Due to the nature of pedestrian traffic, the lines are more conservative than the lines on the bicyclist traffic map. Locations in which counts have not been conducted should not be presumed to have zero pedestrian traffic.

Refer to the 2010 Minneapolis Bicyclist and Pedestrian Count Report for complete data.
