

Pedestrian Safety Program

Supporting Minneapolis' vision to eliminate all traffic fatalities on our streets

Program Goals:

Ensuring safe street crossings is a critical component of the walking experience in Minneapolis.

Through street design changes, the Pedestrian Safety Program enhances safety by providing improved pedestrian crossings at existing non-signalized locations.

Projects aim to reduce street crossing distances, simplify intersection crossings, make pedestrians more visible, and slow turning vehicle movements. Projects focus on pedestrians, although designs benefit the experience of all street users.

Examples of Pedestrian Safety Improvements

What types of changes help enhance pedestrian safety?

- o Intersection simplification
- o Pedestrian safety islands
- o Pedestrian bump outs
- o High visibility crosswalk markings
- o ADA accessible curb ramps

Supporting Vision Zero

The Pedestrian Safety Program supports the City's multidisciplinary commitment to Vision Zero - a strategy to eliminate all traffic fatalities and severe injuries on Minneapolis streets.
