Practice safe cannabis storage

Cannabis should never be given to children* and should be stored securely. It is important to store cannabis products safely and know how to respond in an emergency.

- Store cannabis products in a locked place where your child (and pets) cannot see, reach, or access them.
- Store cannabis products in their original child-resistant packaging and keep the label on.
- Store cannabis edibles separately from regular food and drink.

**Unless prescribed by a doctor*

If a child eats or drinks cannabis products, they may experience:

- Changes in behavior (including sleepiness, intense happiness, irritability, anxiety, and/or paranoia)
- Rapid heart rate
- Nausea/vomiting
- Slurred speech
- Dizziness
- Poor coordination or uncontrollable movements
- Low energy
- Seizures
- Coma

If a child consumes cannabis that is not medically certified for them, immediately call a medical professional or the free Poison Control Center hotline at 1-800-222-1222.
